

LOST PROFILE lighting products should only be installed by a licenced, experienced electrician, who will also need 1 or 2 capable assistants. LOST PROFILE lighting products have sensitive, un-lacquered metal and glass surfaces which are prone to marking and scratching when handled incorrectly. Please only use rubber or cotton gloves to handle these products, and where possible, leave the product wrapped in its packaging until fully installed.

**LOST PROFILE light fixtures are 12 VOLT products and need to be powered by a 12 VOLT POWER SUPPLY UNIT.
NEVER connect a LOST PROFILE light fixture directly to mains power.**

Step 1 - Electrical connection

- A) Ensure the mains power is switched off at the switchboard.
- B) Take the supplied LED driver and connect it to the mains using the information on the driver to connect mains to the input.
- C) Position the light fixture nearby the wall so that the excess cabling can reach the power supply. Make connection between the light fixture and the 12V power supply.

PLEASE NOTE - if you are installing onto a solid surface with no wall cavity to house excess cabling and driver, you will need to locate the driver remotely.

Step 2 - Attaching the fixture

- A) Remove fixture from box and remove wrapping.
- B) Unscrew the 2 screw-covers at the top and bottom of the fixture.
- C) Feed excess cabling and LED driver into the wall cavity.
- D) Position the fixture and put screws or toggle bolts through the fixture and into the wall or substrate, connecting it to the wall.
- E) Re-install the brass screw-covers over the screw heads.

PLEASE NOTE -

Colossal Wall 450 = 5KGS

Colossal Wall 900 = 10KGS

It is your responsibility as the installer to ensure that the wall has sufficient support to bear the load of the light fixture.

It is your responsibility as the installer to ensure that the correct screws are used and are able to bear the load of the light fixture.

The screws used in this installation will need to have a head no larger than 9mm diameter, any larger will result in the screw-covers not fitting back over the screw heads.

Step 4 - Test the fixture.

Your installation has been successful - Congratulations! If you need help troubleshooting with your installation, you can contact us at info@lostprofile.net or call us on +61 (0)413 476 955

See our Dimming Guide for options regarding dimming the fixture.

We thank you for choosing our product, and hope it provides light, enjoyment, and unabashed aesthetic confidence to your space for many years to come.
